2 Ans.

Modes of up-keeping

- Mechanized Environmental support services (MESS)

Exclusive for high rise glass, steel & constructed terminal buildings where the manpower, material and machines is given to be taken care by the service contractors.

- Integrated environmental support service (IESS)

Exclusive for the terminal building, auxiliary building excluding the apron area, where manpower and material is to be taken care by the third party and the machine will be provided by the airport authority.

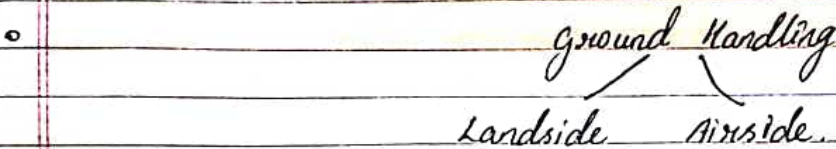

- Environmental support service (ESS)

Exclusive for the auxiliary building where the up-keeping needs to be done by the third party contractor.

Most of the airports give away the up-keeping of the airports to a third party contractors as it turns out to be an expensive function. The airport gives the contract on the above modes of up-keeping and the third party which quotes the price minimum, they are given away the contract. There is an agreement between the airport and the party where there is an Appendix form which mentions the procedure or method of up-keeping, the form also includes what material or equipment to be used in up-keeping the airport.

3. Ground Handling services.

◦ The ground handling is the service which is carried out both on the airside and landside areas of the airport.

A Question:

What is the basis for τ^* ?

τ^* is defined in terms of the closure operator, i.e. $Cl^*(A) = A \cup A^*$. But a simple basis for the open sets of τ^* can be

$$\beta(I, \tau) = \{V - J \mid V \in \tau, J \in I\},$$

where I is an ideal on X . If β is itself a topology, then we have $\beta = \tau^*$ as in the case of the cocompact and cocountable topologies and all the open sets of τ^* are of the simple form $V - J$.

We have the following results which are very interesting:

Theorem: A space (X, τ) is hereditarily Lindelöf iff $\tau \sim I_c$.

Theorem: Let (X, τ) be a space and I_n the ideal of nowhere dense subsets of X . Then $\tau \sim I_n$.

- Step 2: Schematic
- Step 3: Assumptions and Approximations
- Step 4: Physical Laws
- Step 5: Properties
- Step 6: Calculations
- Step 7: Reasoning, Verification, and Discussion

The assumptions made while solving an engineering problem must be reasonable and justifiable.

A step-by-step approach can greatly simplify problem solving.
